

Functional Capacity Evaluation (FCE) Software

Software Summary

Known for being the fastest FCE completion and report generation system on the market, the system determines if your client is putting forth full and consistent effort and whether their pain reports are reliable. It determines the exact percentage of the job an injured employee can perform and can be used for disability purposes. The software knows if you are performing a baseline or a job specific FCE and will change your reports accordingly.

The reports speak the language of physicians, insurance carriers, and employers making it convenient for everyone involved in getting an injured employee back to work. With post test documentation automatically populated and completed in minutes, along with unlimited clinical/technical support, our FCE Software is the easy choice for any clinic looking to increase referrals and grow their business.

Software Features

Fast Report Generation

Takes care of 80% of your standard documentation and gives you the ability to store your own documentation to make each FCE process faster.

Return-to-Work Recommendations

Generates a recommendation sheet outlining the specific abilities of your client following a job specific or a general purpose/baseline FCE.

Reliability & Validity Research

We have been performing functional capacity evaluation research on this system since 2009 and continue to perform research every year.

Job Demands Analysis

Includes a repository of job descriptions that you can immediately pull up and import into your test, saving you valuable time.

"I have been trained in multiple FCE systems and have been using my own FCE testing method for years. I recently switched to OccuPro. It is lightning fast and I love it!"

Gwen Eshleman, PT, CDE-II – Team Rehabilitation
