

# Injury Prevention Software

## Software Summary

This Incident Management Software is a web-based, user-friendly system to compliment your early intervention and injury prevention strategies. You will find it to be the right balance of technology and personal care to help engage employees keeping them healthy, productive, and safe.

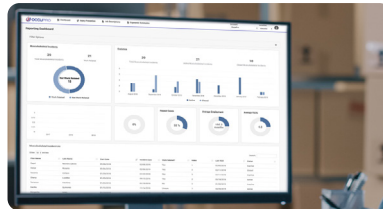

Injury prevention programs partnered with this powerful system help companies reduce incidents by an average of 50%-75%!

## Software Features

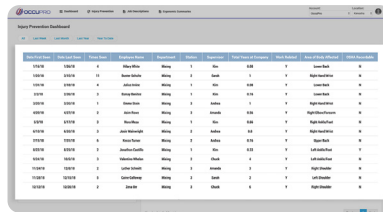

### Scheduling Application

Easy-to-use scheduling feature for both employers and providers. Schedule or view upcoming appointments with auto-generated appointment reminders.

### Metrics

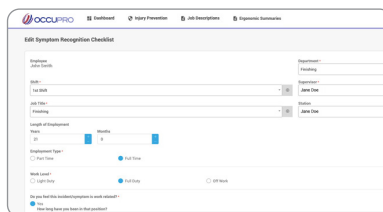

Easily filter through key metric data by job, body part or department. Contacts can quickly view employees, status of case, and work-related case summaries.
