

Return-to-Work (RTW) Software

Software Summary

With specific workers' comp initial therapy evaluations, progress notes, work hardening/work conditioning evaluations, and discharge summaries, this software is unique compared to any other system on the market. The built in Functional Progress Notes and Functional Discharge Summaries are designed to replace your traditional progress/discharge notes and have been approved by workers' comp insurance carriers throughout the US.

These notes/summaries get reimbursed higher than traditional codes and provide objective data regarding which of your workers' compensation patients can be discharged and returned to work and which patients require your work hardening/conditioning program. (Clinics, on average, see 20–25% of their existing patients being referred to their work hardening/conditioning programs following the implementation of our the software.)

Software Features

Functional Progress Note

Provides objective return-to-work data during the episode of outpatient rehabilitation following a 15 to 30-minute functional re-evaluation.

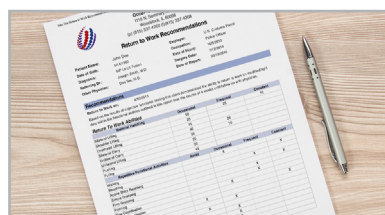

Functional Discharge Summary

Determines if your patient should be discharged and returned to work or should enter your work hardening/work conditioning program.

Work Conditioning Evaluation

Report shows you the exact percentage of return-to-work ability following the evaluation and decides the length of stay based on work hardening research.

Return-to-Work Recommendations

Generates a recommendation sheet outlining the specific abilities of your client following a job specific or a general purpose/baseline FCE.

"I've been impressed at the ease of use and how much time I save. The reports are impressive and provide a huge advantage in marketing efforts when meeting with physicians/companies. I highly recommend this software."

Brandi Meyer, ATC/L.LPTA, CIRS – Heartland Regional Medical Center
